DRUGCHECK APP MAKES DRUG DETECTION EVEN MORE CONVENIENT

The new Dräger DrugCheck app makes using the DrugCheck 3000 even simpler. With the app, users can scan, evaluate, document, and archive test results in just a handful of steps.

The app also features a video guide on how to use the DrugCheck 3000, how to evaluate test results using your smartphone camera, and store the results for subsequent use.

Data Storage Convenience

- Users can document the test results in a clearly arranged manner for record-keeping and archiving purposes. The recorded data comprises of personal details of the tester, test subject details and the date, time, and geographic data. Thanks to the data storage function, the measurement logs can be retrieved at a later date. You can also forward the logs quickly and easily using your smartphone, meaning that immediate remote action can be taken in response to a test result.

iOS/Android Compatibility

- The DrugCheck app is now available free of charge for iOS and Android operating systems from the App Store and Google Play Store. Scan the QR code to go directly to the download page in the App Store or Google Play Store.
